

# PHOTOGRAPHY BY DR. PAUL KRAWITZ

Dr. Krawitz first began photographing at age 6 in his hometown of Buffalo, New York using Kodak Plus X Pan black and white film and a Brownie Hawkeye camera. He loved the “burning” and “dodging” of darkrooms as a teenager and grew to love various camera films for the different ways in which they would “see” light and color.

While some of the office photographs were taken with film cameras, Dr. Krawitz now shoots exclusively with digital cameras and fine tunes his images in the digital darkroom. He describes his overall style as “discovering spontaneous wonder,” whether it be people, unique images, or places.

Dr. Krawitz’s photographs are available for sale at [KrawitzPhotography.com](http://KrawitzPhotography.com), where 50% of proceeds are donated to the Foundation Fighting Blindness.

## What cameras does he use?

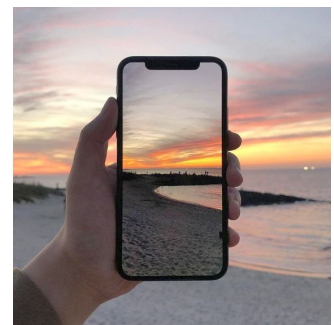

Nikon D90

Mamiya 7

Fuji 100

iPhone
